

WHY WE DITCHED THE MATTRESS...

Inhaled allergens derived from house dust mite (HDM) faeces play a major role in allergic disease, especially in asthma. The number of people affected is rising throughout Europe (and indeed worldwide), now impairing the health and quality of life of a substantial proportion of children, as well as many adults, and placing a significant burden on health services.
Source: 'A Hygrothermal Model of House Dust Mite Response to Environmental Conditions in Dwellings' by the Bartlett Graduate School, University College London.

We lose more than a quarter of a litre of body moisture each night and shed almost half a kilo of skin scales in a year. This unhygienic environment is a haven for dust mites, whose droppings are known to aggravate asthma and eczema symptoms.

AMMIQUE®

The cleanest bed *in* the world

- No mattress. Instead, tailored Coversofts (toppers) are removeable and washable at 60 degrees
- 100% cleanable throughout. Easy access for vacuuming and steam cleaning
- Excellent airflow – void beneath can be vented with fresh cool or warm air

WHY IT IS TIME TO DITCH THE MATTRESS...

According to The Waste and Resources Action Programme (which operates as WRAP) an estimated 5.9 million end of life (EOL) mattresses in the UK were disposed of in 2014. 73% were sent to landfill and 11% were incinerated. Of the 8 million mattresses discarded in 2018 in the UK; 6.25 million are destined for landfill or incineration.

Waste levels in the UK are generally at an all-time high, with over 45 million tonnes of waste dumped each year and England's landfill sites are set to reach maximum capacity by 2022. Mattresses are a major contributory factor. Source: Cabinet Maker (August 2019)

AMMIQUE®

The cleanest bed *for* the world

- Materials are recyclable, ethically sourced and FSC certified
- Structure and mechanism guaranteed against wear and tear for life
- Truly sustainable and energy efficient use of plastic, stainless steel and materials

The Ammique Bed is manufactured to the highest specification and based on rigorous, independent testing has an estimated functional life of over 250 years.
